

Affordable Tablet-Style POS for Small Retail or Food Service

Tabby provides a contemporary platform that is easy to use and maintain, but without the budget strains and complexity of a full-scale POS system. With minimal assistance, merchants can setup their own store database; establish items, prices, departments, groups and other options. Operation is intuitive; tablet-savvy operators are productive after just minutes of instruction.

What is Tabby?

Tabby is a WEB Server integrated in the SAM4s Ellix 40 POS printer and provides the POS software application. To enable wireless mobility, simply connect Tabby to a wireless router. Tabby runs on any browser capable device regardless of operating system, including PCs, mobile devices or tablets. Use Tabby to register sales, print receipts, and record payments. Tabby Backoffice provides store management tools, database maintenance, stock entry and management reports.

Tabby Advantages

- Tabby does not rely on tablet or device resources.
- No application to install – adding or replacing a tablet or mobile device can be done “out of the box”. Simply open your browser and enter Tabby’s IP address.
- Price changes and managerial updates take effect simultaneously to all devices without workflow disruption.
- Remote management is inherently ready.
- No Internet is required, but connection may be desired for emailed reports or remote access.

Ice cream, yogurt, coffee, sandwich and other quick service restaurants.

Select Your Preferred Device

Whatever your device preference, Tabby is ready. Many find that a 10" tablet such as the iPad provides the best combination of screen size, mobility and familiarity. Others may prefer a fixed terminal – which may be more cost effective than an iPad and a stand. You choose; you can access Tabby using any device, running any operating system that supports a browser.

Connectivity

- Connects to up to 8 point of sale devices.
- Tabby's two serial ports support up to 4 devices.
- Supports up to 4 printers. (Tabby printer plus 3 Ethernet/WiFi printers.)
- Each printer can drive up to two cash drawers.

Food trucks, fair stands, carnivals and mobile concessions.

Select Your POS Peripherals

Peripherals supported include remote printer, cash drawer, customer display, bar-code scanner, electronic payment device.

Landscape, garden and retail where mobility is essential.

Deploy up to four transaction or kitchen printers.

Display orders on video system.

Tabby Features

Kitchen Printer

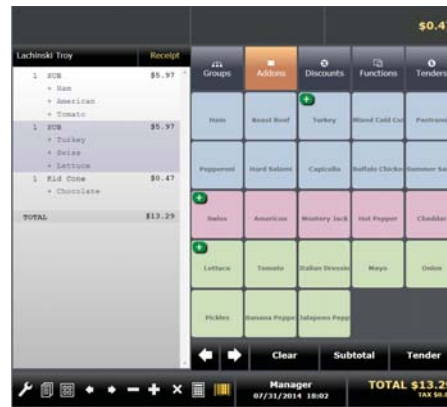

Print kitchen requisition tickets at your Tabby printer or optional serial or Ethernet printers. Tickets organize items with condiments and/or prep instructions.

Condiments

Use Tabby's condiment feature to enforce condiment or instruction entry by item. You can display groups of relevant condiments after an item is entered. Enforce entry of one or more condiments and/or enforce selection from more than one group. For example, if a submarine sandwich is entered, the operator can be forced to select a single meat and cheese, and then enter any number of veggies and spreads.

Select a previous item to delete or change condiment selections.

Multiple condiment groups are displayed by color. Plus "+" Indicates selected.

Store and Recall

Tabby gives you the flexibility to enter an order and defer payment to a later time. Easy to use for call in orders or if an inside customer is running a tab.

Scanning

Tabby supports serial scanners connected to a Tabby port or wireless Bluetooth scanners paired with your Bluetooth enabled device. Use the scanner to check out, or to add items or stock in Tabby Backoffice.

Electronic Payment Security

Tabby uses the PA-DSS validated Datacap DataTran™ devices to process integrated electronic payments. Credit, debit, gift and EBT payments can be accepted.

Client Tracking

You can select a specific customer at the time of sale so that you can track sales levels. You can view either revenue or entire receipts.

Deploy up to eight POS devices.

on the E-Pad kitchen

Connect up to eight cash drawers.

Connect up to two pole displays.

Add a scanner at each POS device.

Datacap payment device.

Tabby

Retail Version 2

Detailed reports and charts can be retrieved in seconds.

Reports

Significantly, Tabby doesn't just maintain monthly or yearly reports, like other systems. Instead Tabby archives each daily report in its database. So if you are planning staff for the upcoming holiday weekend, you can go back and look at sales on the same day for previous years. With all reports in the report database, you can select how you want to review sales by day, by week, month, quarter, year or for any range of days you select.

Data Stored Locally – Not in the Cloud

- Daily X & Z Reports
- Sales Statistics Reports
- Payments Reports
- Payment Statistic Reports
- Group Reports
- Operator Reports
- Item Reports
- Inventory Reports
- Department Reports
- Journal Management – Search, Review, or Reprint Receipts from the Electronic Journal
- Sales Overview Dashboard
- Details Sales Charts and Graphs
